

How Your PDF Becomes Searchable Knowledge

A journey from static file to dynamic insight.

Your documents hold valuable intelligence, but it's locked away.

Countless reports, contracts, and manuals contain critical information. But as static files, their potential is dormant, making answers difficult and time-consuming to find.

The journey begins with a single upload.

You provide any PDF document to the system, initiating the process of unlocking its contents.

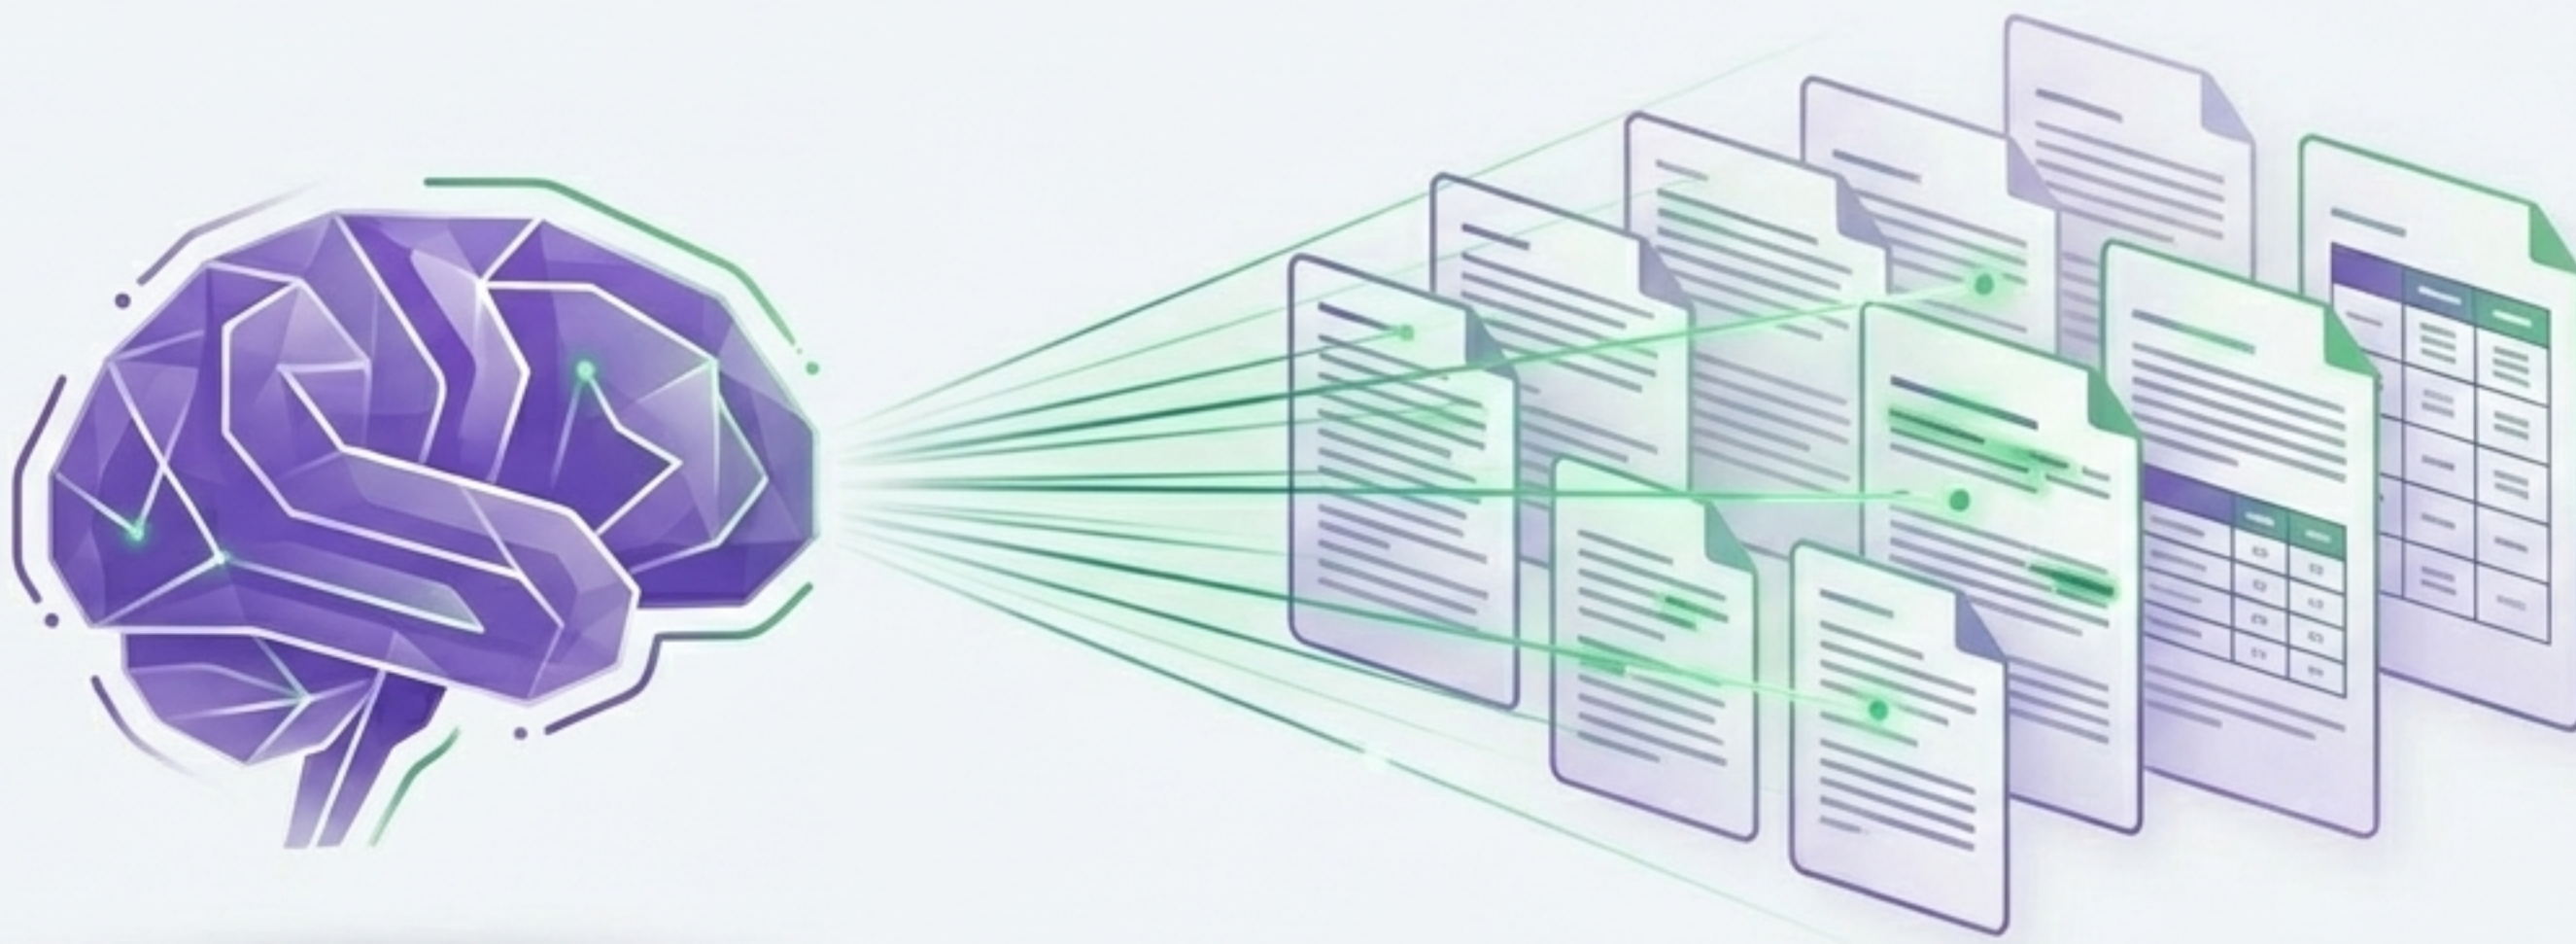

The system deconstructs the document to its core elements.

To understand the whole, we first separate the parts. Every page is isolated, and all text, images, and tables are extracted for individual analysis.

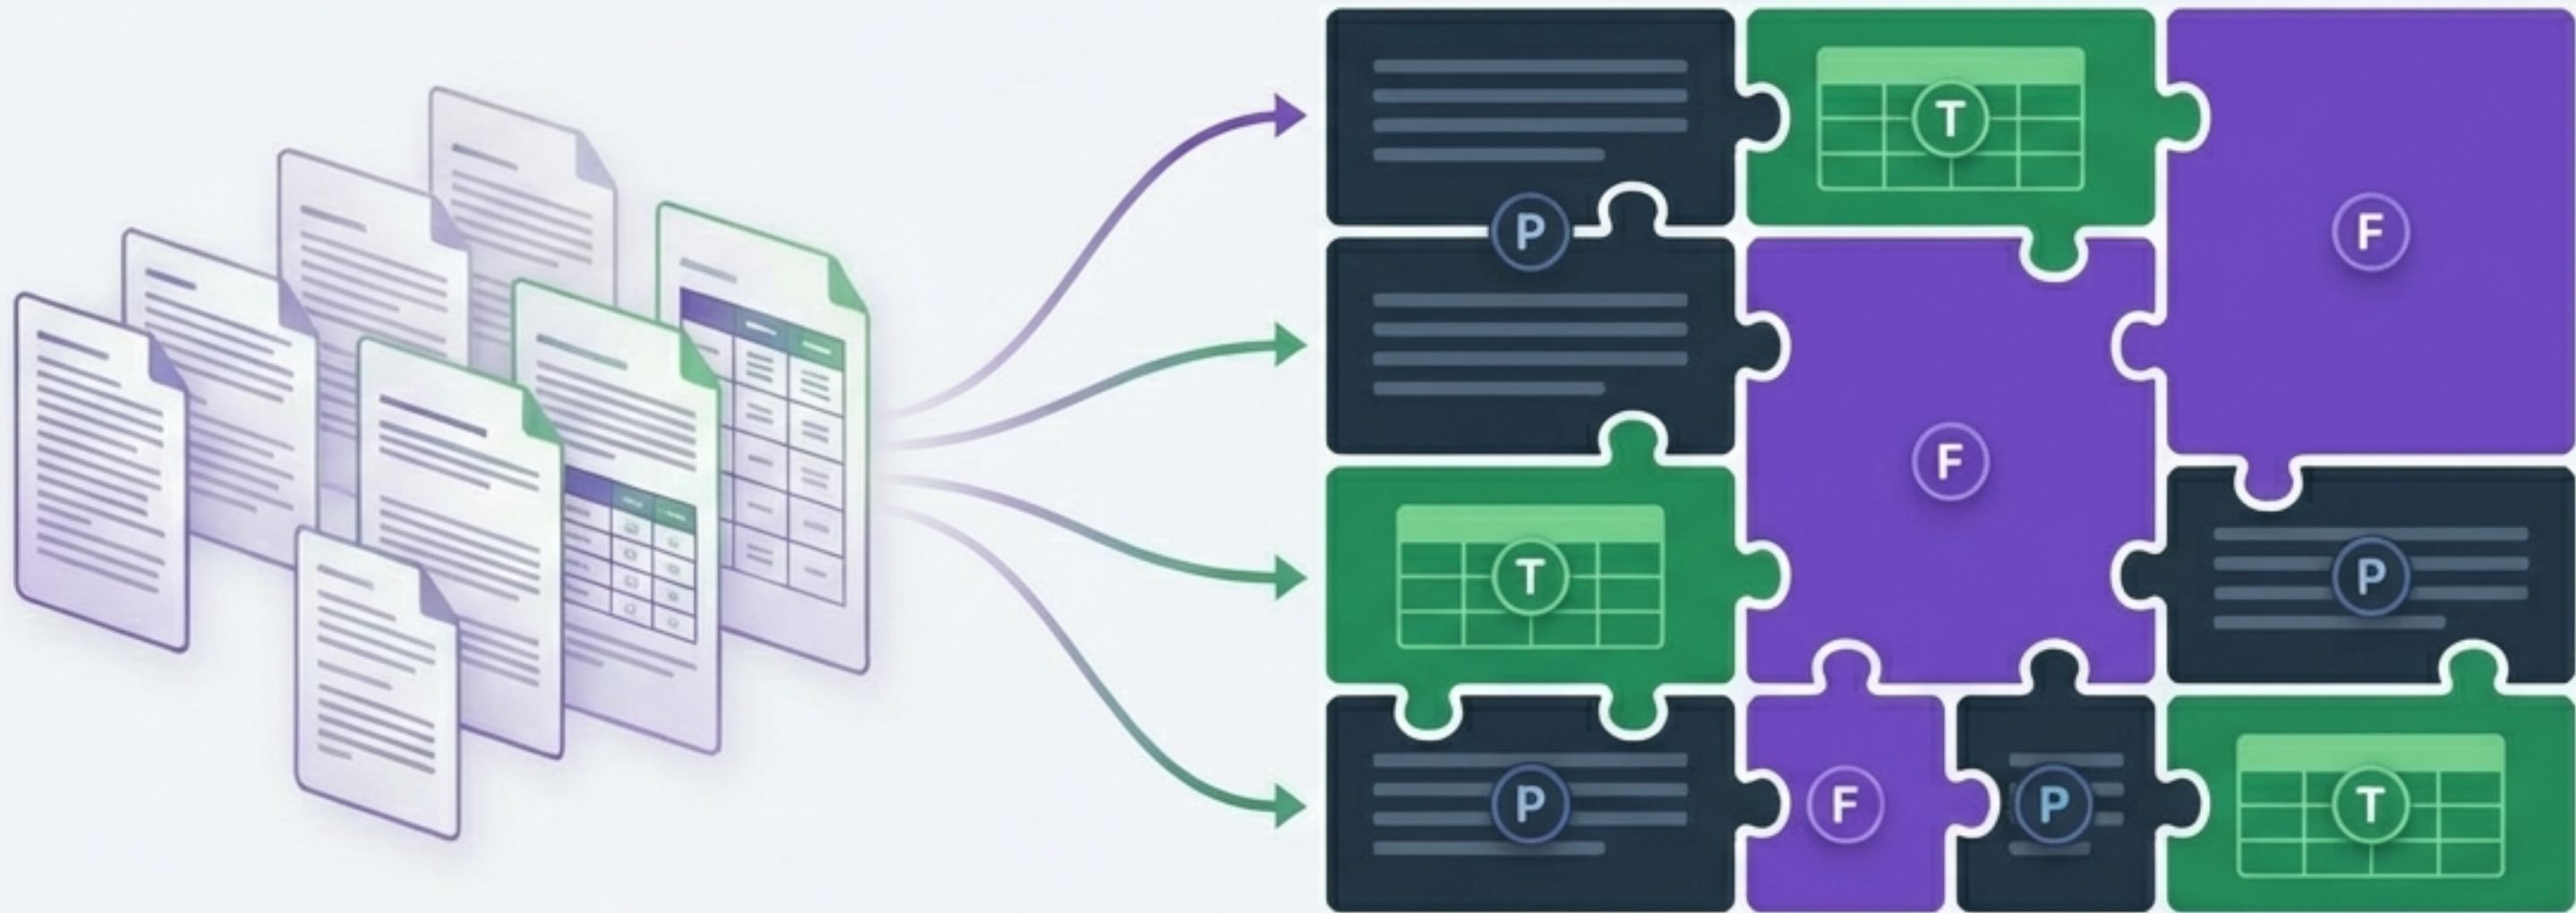

Azure AI reads every word and table like a human would.

Using advanced models, the system comprehends the content, context, and structure of the document with superhuman speed and accuracy.

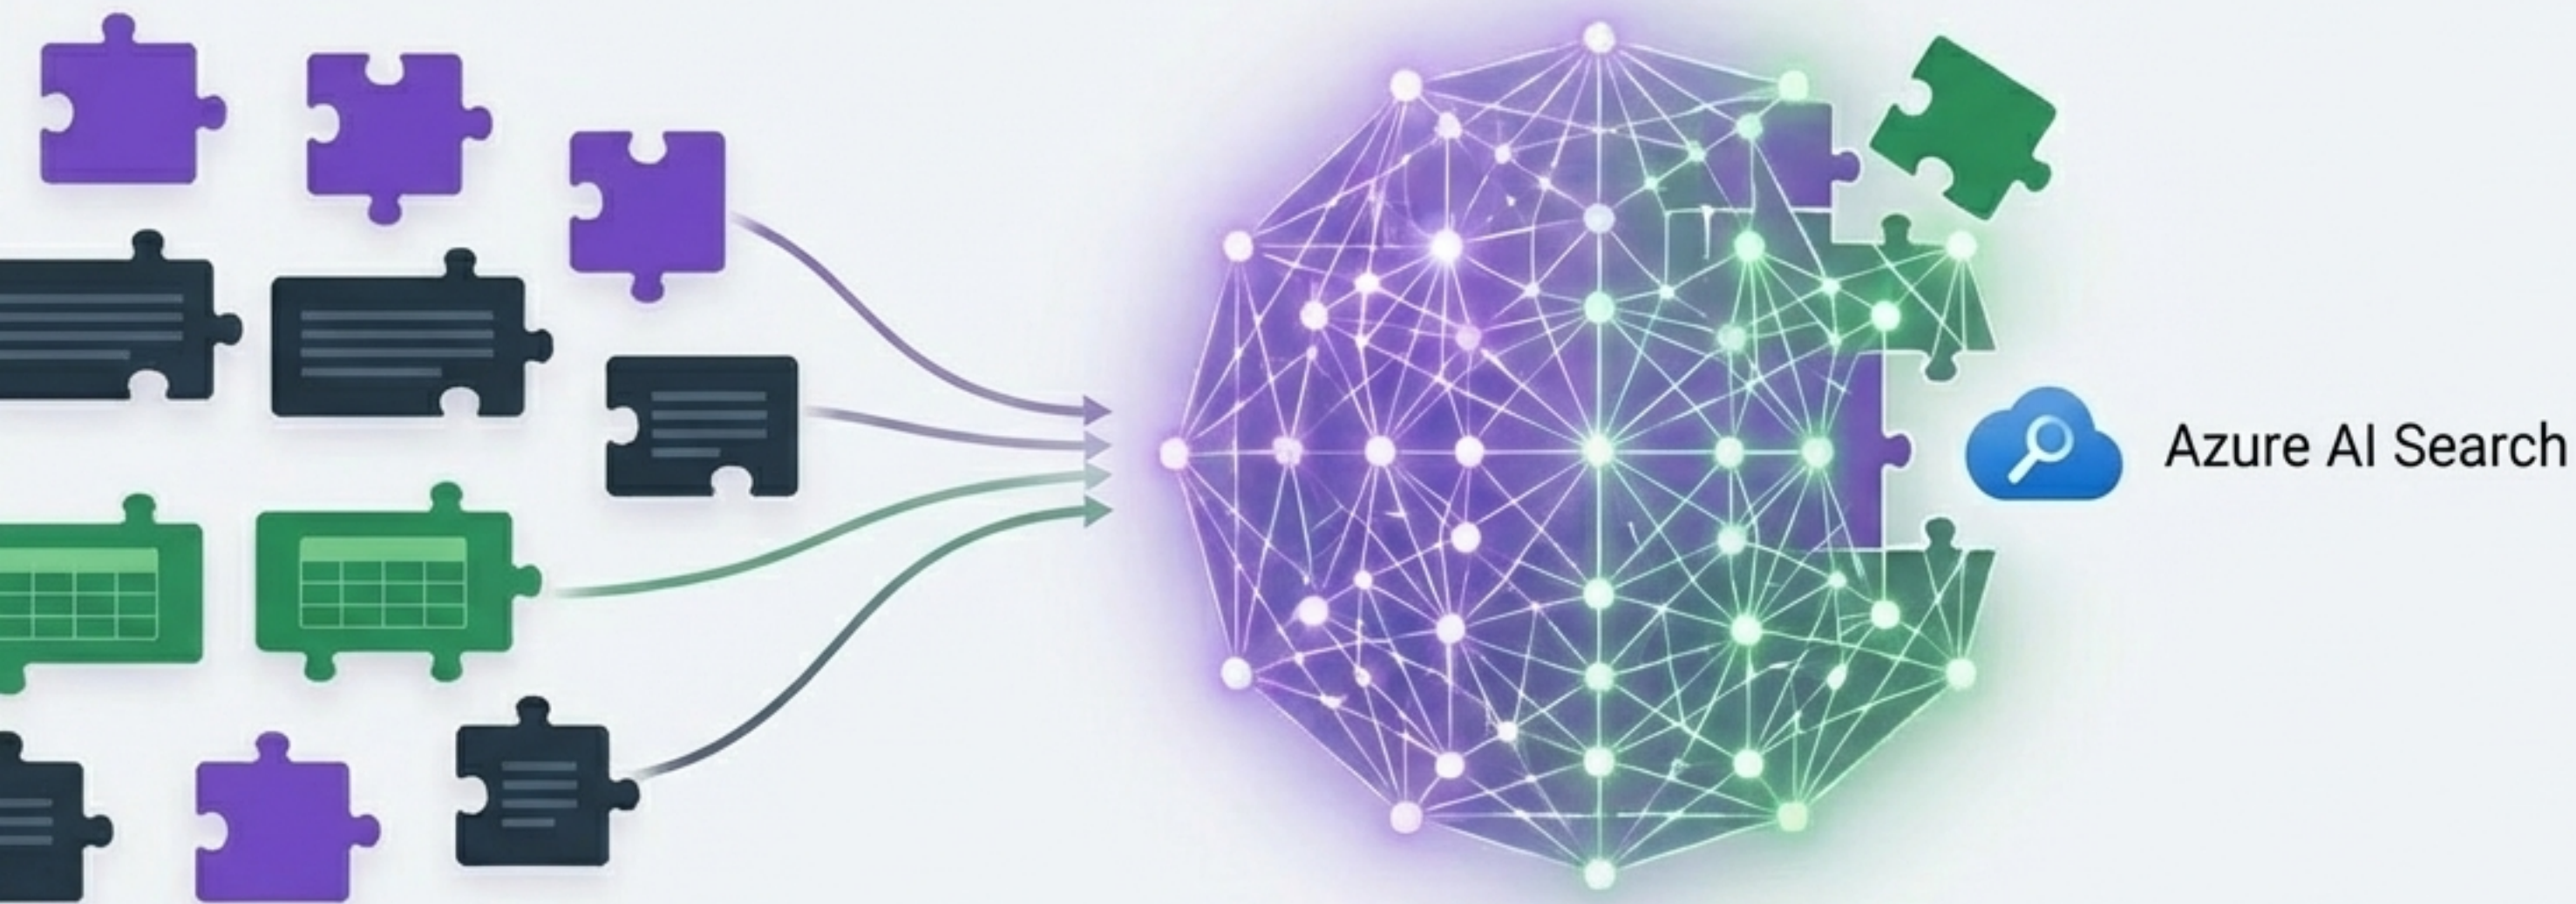

Content is organized into meaningful, intelligent sections.

Instead of a wall of text, the document is rebuilt as a collection of structured blocks: paragraphs, tables, lists, and figures. This preserves context for smarter searching.

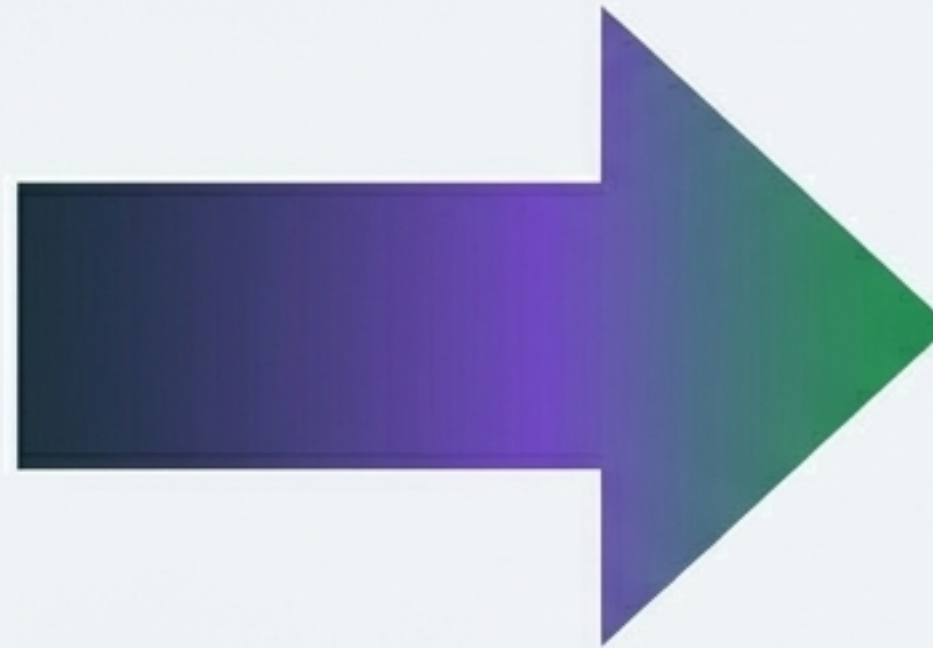

A searchable index is built—the document's new digital brain.

Each chunk is indexed and stored in a secure knowledge base, creating one centralized solution for agentic retrieval-augmented generation (RAG) workflows.

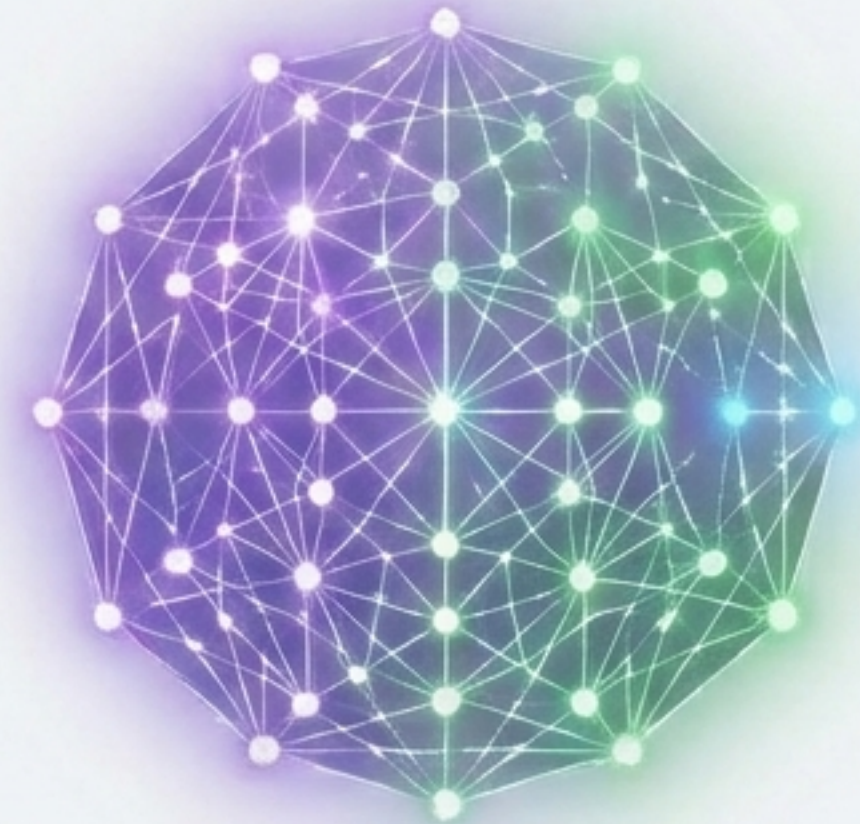

From a static file to a dynamic knowledge asset.

BEFORE

AFTER

Now, you can ask your document anything.

Pose questions in natural language and receive precise answers drawn directly from the source, complete with citations.

What was our Q4 revenue growth in the EMEA region?

Q4 revenue growth in the EMEA region was 12.7%, primarily driven by new enterprise contracts in Germany and the UK.  Page 14, Section 3

Unlock insights, accelerate decisions, and empower your teams.

Find hidden connections
and crucial data points
instantly.

Reduce manual search
time from hours to
seconds.

Give everyone in your
organization access to
expert knowledge.

Built on Microsoft's enterprise-grade platform for AI

Build, evaluate, and deploy generative AI solutions and custom agents securely with Microsoft Foundry and the Azure AI portfolio.

**Your organization's next breakthrough
is already in your documents.**

It's time to unlock it.
